

RAVIRAJ HANMANT KATKAR

Full-Stack Developer | DevOps Engineer

Pune, India | +91 9112437153 | ravirajhkatkar@gmail.com | linkedin.com/in/raviraj-katkar-736438227

PROFESSIONAL SUMMARY

Full-Stack Developer with 4+ years of experience building, deploying, and operating scalable web and mobile applications using JavaScript, TypeScript, React.js, React Native, and Node.js. Delivered 16 production applications across 3 companies spanning fintech, edtech, IoT, and e-commerce, covering RESTful API design, MySQL schema modeling, and responsive front-end development. Owns the release path end to end through Docker, GitHub Actions CI/CD, and Microsoft Azure across 3 deployment environments. Experienced in Agile/Scrum delivery, unit testing, code review, and mentoring junior developers.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL, Bash, YAML

Front-End: React.js, React Native, Redux, MobX, Context API, React Hooks, Expo, Responsive Web Design

Back-End: Node.js, Express.js, RESTful API Design, API Integration, JWT Authentication, Microservices

Databases: MySQL, SQL, Database Design, Schema Modeling, Query Optimization, Backup and Restore

Cloud & DevOps: Microsoft Azure (Virtual Machines, App Service, Storage, Networking), Docker, GitHub Actions, CI/CD Pipelines, Build Automation, Release Management, Linux (Ubuntu), Shell Scripting

Testing & Debugging: Jest, React Testing Library, Unit Testing, Integration Testing, Postman, Chrome DevTools, Log Analysis

UI Libraries & Styling: Tailwind CSS, Bootstrap, Material-UI, Styled Components

Version Control & Tools: Git, GitHub, Branching Strategies, Pull Request Workflows, Code Review, Jira, SharePoint

Methodologies: Agile, Scrum, SDLC, DevOps Practices, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Senior Software Engineer (Full-Stack and DevOps) | EarnWealth Solutions Pvt. Ltd. | Pune, India

November 2023 - Present

- Shipped 9 full-stack applications end to end using React.js, React Native, and Node.js, owning architecture, API design, front-end implementation, cloud deployment, and production release across both iOS and Android.
- Architected RESTful APIs in Node.js and Express.js serving both mobile and web clients, standardizing request validation, error handling, and JWT-based authentication across 9 services.
- Modeled and tuned MySQL database schemas, rewriting slow queries and adding indexes that measurably cut API response times on high-traffic endpoints.
- Administered and secured Microsoft Azure cloud servers hosting production fintech applications, managing networking, storage, environment configuration, and role-based access control.
- Implemented GitHub Actions CI/CD pipelines across 9 repositories, automating build, test, and release workflows to replace a fully manual deployment process and enable same-day releases.
- Containerized Node.js services with Docker to create reproducible environments across 3 stages: development, staging, and production.
- Connected third-party services and payment gateways into fintech products, handling end-to-end transaction flows, webhook processing, and reconciliation logic.
- Built shared React and React Native component libraries with Redux and Context API state management, cutting duplicated UI code reused across 9 products.
- Authored unit and integration tests with Jest and React Testing Library, wiring automated suites into pipelines so failing builds are blocked before deployment.
- Established Git branching strategies and pull request gates with automated checks, blocking untested code from production branches, and monitored live applications through log analysis to diagnose incidents and reduce downtime.
- Partnered with design, QA, and backend teams across 2-week Agile/Scrum sprints to define system architecture, groom the backlog, and deliver features on schedule.
- Mentored junior developers through code review and pair programming, and ran client-facing requirement analysis, sprint demos, and post-deployment support.

Selected Projects

- SpeedTech.AI (Raiya) - AI-powered telecalling platform; built the Node.js backend and React Native client, and solely owned Azure infrastructure, Docker packaging, and the full CI/CD pipeline.
- Roadstat - Real-time fleet and asset tracking platform with live GPS streaming, route optimization, and analytics dashboards on automated cloud deployment.
- Sicca (Sense It Out) - IoT platform for farmers to remotely control water pumps and fertilizer systems via device-facing APIs. PhishBowl - scam detection and reporting platform with moderation backend and automated deployments.
- Size24 - e-commerce app covering catalogue, cart, checkout, and order management APIs. Careers and Me - psychometric career assessment platform with scoring engine and reporting dashboards.

React Native Developer | Appzia Technologies | Pune, India

July 2022 - November 2023

- Launched 5 cross-platform mobile applications from scratch using React Native and JavaScript, covering the full SDLC from requirements through App Store and Google Play Store release.
- Consumed RESTful APIs and implemented offline caching, pagination, and optimistic UI updates that measurably improved perceived load performance.
- Standardized Git workflows and release branching across 5 concurrent client projects, reducing merge conflicts and rollback incidents.
- Automated build, code signing, and packaging steps, and refactored legacy screens into reusable components with memoization and list virtualization for faster rendering.
- Led cross-functional teams to gather and prioritize requirements, coached junior developers, and delivered post-launch support including issue triage and hotfix releases.

Selected Projects

- Influny - social media app with reels, stories, and real-time messaging. Bioenzyme - e-pharmacy app with prescription upload and home delivery. AMT - hotel management system for reservations and billing. Animade - social learning app for notes and educational content. Unicircle - student portal for timetables, results, and parent monitoring.

Software Engineer Intern | Aadi Technology | Pune, India

December 2021 - July 2022

- Developed responsive UI components for web and mobile applications using React.js and React Native, verifying cross-platform and cross-browser consistency.
- Wired up RESTful APIs and multi-provider payment gateways on the KPay digital wallet, delivering complete transaction flows from initiation through settlement.
- Supported deployment and configuration of live production applications during a 6-month internship, and took part in Agile/Scrum ceremonies including sprint planning, stand-ups, and retrospectives.

Selected Projects

- KPay - digital wallet and payment app with multi-gateway integration and transaction management. RITE School - school communication app for notes, files, and announcements.

KEY ACHIEVEMENTS

- Delivered 16 production-grade applications across 4 domains - fintech, edtech, IoT, and e-commerce - from concept through cloud and app-store deployment.
- Solely architected and shipped an AI-powered telecalling platform spanning 6 layers: Node.js backend, REST APIs, React Native client, Azure infrastructure, Docker, and CI/CD.
- Rolled out GitHub Actions CI/CD pipelines with branch protection and automated test gates across 9 repositories, eliminating a fully manual deployment process and reducing defects from untested merges.
- Promoted from intern to Software Engineer across 3 roles in 4 years, progressing from UI component work to owning full-stack architecture and production cloud infrastructure.

EDUCATION

Bachelor of Computer Applications (BCA) | Shivaji University | Dahiwadi College, Satara, India

May 2021
